

OmniWealth Kadai

Feature overview & comparison · 03 September 2026

OmniWealth Kadai is an offline-first barcode billing + stock app for small Indian retail shops — maligai (provision) stores, mobile and card shops, GST-registered or not. This overview lists what it does, alongside a comparison with the conventional Windows / LAN shop-billing software it replaces. Everything below is built and running; a few items are noted as still under final device validation.

Legend. **Yes** = built and in use. **Partial** = present but lighter, or handled a different way. **No** = not built (the last two sections explain the deliberate omissions). “Conventional POS” means a typical desktop shop-billing package of the kind these shops use today.

1 Feature comparison

1.1 Billing at the counter

Feature	OmniWealth Kadai	Conventional POS
Barcode scan / search-to-add	Yes	Yes
Voice item entry (Tamil / English, AI-matched to the catalogue)	Yes	No
Edit rate & quantity at the counter	Yes	Yes
Per-line discount — Rs or %	Yes	Yes
Whole-bill discount	Yes	Yes
Tenders: cash / UPI / card / credit / split	Yes	Partial
Round the bill to the nearest Re 1	Yes	Yes
Salesman tag on each bill	Yes	Yes
Hold a bill and resume it later	Yes	Partial
Quick amount-only bill (no line items)	Yes	Yes
Refund / sales return (GST reversed on the credit note)	Yes	Yes
Bill-series prefix (A / B / C)	Yes	Yes
Back-date a bill (owner only)	Yes	Yes
Loyalty points on billing	Yes	Yes

1.2 Customers & credit (kadan)

Feature	OmniWealth Kadai	Conventional POS
Customer master — name, phone, place, GSTIN	Yes	Yes
Credit limit with over-limit warning at billing	Yes	Yes
Opening balance carried from the old book	Yes	Yes
Running ledger with balance after every entry	Yes	Yes
Record a receipt (cash / UPI)	Yes	Yes
WhatsApp payment reminder (with a UPI pay link)	Yes	No
Credit-risk “watch” flag on a customer whose debt is climbing	Yes	No
Phone-number loyalty points (no physical card)	Yes	No
“To collect” total on the home screen	Yes	Partial

1.3 Orders / job-work (wedding cards, flex, repairs)

Feature	OmniWealth Kadai	Conventional POS
Advance booking with free-text line items	Yes	Partial
Booking advance + part-payments recorded as receipts	Yes	Partial
Status: booked → in progress → ready → delivered	Yes	Partial
On delivery, auto-create the bill for the balance	Yes	Partial
Due-date “coming up” reminders	Yes	Partial

1.4 Purchases & suppliers

Feature	OmniWealth Kadai	Conventional POS
Supplier master	Yes	Yes
Purchase / inward invoice with line items	Yes	Yes
GST input tax credit (ITC) captured per invoice	Yes	Yes
Ex-GST cost feeds the product cost & margin	Yes	Yes
Supplier payable / balance owed	Yes	Yes
Record a payment to the supplier	Yes	Yes
Photo of a supplier bill → booked as a purchase	Yes	No
Predictive reorder list + one-tap WhatsApp draft to the supplier	Yes	Partial
Import an existing purchase register (CSV)	Yes	Partial

1.5 Expenses

Feature	OmniWealth Kadai	Conventional POS
Running-cost expenses (rent, power, wages, transport, tea)	Yes	Yes
Category-wise breakdown	Yes	Yes
Cash-drawer effect (cash paid out)	Yes	Yes
Import an existing expense register (CSV)	Yes	Partial

1.6 GST & tax

Feature	OmniWealth Kadai	Conventional POS
GST on bills — price-inclusive or added on top	Yes	Yes
CGST / SGST split, “Tax Invoice” header	Yes	Yes
Composition scheme (1% of turnover)	Yes	Yes
GST output vs input credit, net payable	Yes	Yes
GSTR-3B month summary — boxes ready to type into the portal	Yes	Partial
Presumptive income tax (s.44AD) estimate	Yes	No
Advance-tax instalment reminders	Yes	No
Inter-state (IGST) billing	No	Yes

1.7 Reports & intelligence

Feature	OmniWealth Kadai	Conventional POS
Day book — every transaction, chronological	Yes	Yes
Item-wise sales profit (qty, sale, cost, profit, %)	Yes	Yes
Cash book with running balance	Yes	Yes
Profit & Loss (sales – cost of goods – expenses)	Yes	Yes
Sales summary — day / yesterday / 7-day / any range	Yes	Yes
Fast movers & dead stock	Yes	Partial
Predictive reorder suggestions (velocity vs stock)	Yes	No
7-day cash-flow forecast (kadan in, suppliers out)	Yes	No
Low-stock and expiry alerts	Yes	Partial
Receivables / payables outstanding	Yes	Yes
Trial balance / balance sheet	No	Yes
Bank reconciliation / bank ledger	No	Yes
Accountant export — one multi-section CSV	Yes	Partial
Accountant export — Tally import XML	Yes	Partial

1.8 Printing & messaging

Feature	OmniWealth Kadai	Conventional POS
Print receipt on 58 / 80 mm thermal roll	Yes	Yes
Direct Bluetooth thermal printer	Yes	Yes
Shop name / address / footer on the bill	Yes	Yes
Send the receipt on WhatsApp	Yes	No
Free UPI pay link on bills & kadan reminders	Yes	No
Daily WhatsApp digest to the owner (evening)	Yes	No

1.9 Customer-facing

Feature	OmniWealth Kadai	Conventional POS
Customer self-scan basket — QR / short-code handoff to the counter	Yes	No
Customer “pay now by UPI” from their own phone	Yes	No
Built-in AI assistant (ask about stock, sales, GST)	Yes	No
Ask-AI bar on the home screen	Yes	No

1.10 Platform & data

Feature	OmniWealth Kadai	Conventional POS
Works fully offline at the counter	Yes	Yes
Automatic cloud sync across devices	Yes	No
Runs on any Android phone	Yes	No
Multiple counters / devices, same data	Yes	Partial
One login, owner + staff roles	Yes	Partial
Product name auto-filled from an online barcode catalogue	Yes	No
Import products / customers / orders / expenses / purchases	Yes	n/a
Automatic encrypted daily off-site backups	Yes	Partial

2 What each feature does

2.1 Billing

Counter sale

Scan a barcode or search by name, adjust rate and quantity on the line, take cash / UPI / card / credit, or split across two. A quick amount-only bill skips line items for a phone-shop sale. Every bill can carry a salesman name and an optional bill-series prefix ("A" → A-K7-0042) for shops that ran A/B series before.

Discounts & rounding

Per-line discount in rupees or percent, plus a whole-bill discount. The payable is rounded to the nearest rupee (the counter norm); the rounding difference is shown as a separate line, and the GST breakup stays on the pre-round figure.

Back-dated bill

An owner can record a bill the shop missed yesterday: the sale and its stock movements land on the chosen date so day-book, reports and GST are all right, while the sync timestamp stays "now".

Refund / sales return

A partial or full return against a bill creates a credit note with negative amounts, puts the stock back, and now correctly reverses the GST so GSTR-3B and the day summary net down.

Hold & resume

Park a half-built cart, serve the next customer, pull it back later. Held bills are local to the device.

2.2 Voice billing (Tamil / English)

Speak the list

Tap the mic and say the items — "2 kg atta and one colgate, 5 maggi". One utterance is split into quantity + name lines; English and Tamil number words are understood.

AI matching

When online, the transcript is matched against the shop's own catalogue by AI, so colloquial and mixed-language names work ("atta" → Aashirvaad Atta 5kg). Offline, a rule-based matcher does a best-effort search. Either way the items land in the cart for the owner to review — nothing is auto-billed. Items it can't place are listed so the owner adds them by hand.

2.3 Customers & kadan (running credit)

Ledger

Each customer has a phone, place, optional GSTIN, a credit limit and an opening balance. The balance is derived from credit sales and receipts — never stored — with a running ledger and an over-limit warning at billing.

Reminders + UPI link

A one-tap WhatsApp reminder for money owed, with a "pay by UPI" link (see 2.8) attached automatically when there is a balance.

Credit-risk flag

A customer whose balance has climbed across the last two monthly windows — and is over Rs 500 — gets an amber "watch" chip and a one-line explanation. A soft signal; the owner still decides.

Loyalty points

Optional, phone-number based — no card. The owner turns it on and sets the rate (e.g. 1 point per Rs 100; 1 point = Rs 1 off). Points accrue on any bill attributed to a customer and redeem as an auto-filled bill discount.

2.4 Orders, purchases & expenses

Orders / job-work

Advance-book wedding cards, flex, repairs: line items, a booking advance and part-payments (recorded as receipts), a status track, and a due date. Delivering an order auto-creates the balance bill.

Purchases & ITC

Book a supplier invoice line by line; the ex-GST cost updates the product cost and margin, the GST portion becomes input tax credit, and the unpaid balance sits in the supplier ledger. Snap a photo of a paper bill and the app reads the lines.

Predictive reorder

The Reports screen lists items whose stock will run out within about three weeks at the recent sales rate, with a suggested top-up quantity, grouped by the supplier who last stocked them — one tap drafts the reorder message to that supplier on WhatsApp.

Expenses

Rent, power, wages, transport, tea and the rest — category-wise, with the cash-drawer effect, and an optional GST-input figure that feeds GSTR-3B.

2.5 GST & tax

On the bill

GST can be price-inclusive (extracted for the invoice) or added on top. $CGST = SGST = \text{tax} / 2$ (intra-state only). A GSTIN turns the receipt into a “Tax Invoice”. Composition shops bill plain and the app tracks 1% of turnover.

GSTR-3B month summary

Pick a month (defaults to last month) and get the boxes ready to type into the portal: 3.1(a) taxable value + CGST/SGST per rate, box 4 eligible ITC (purchases + input-service expenses), 5.1 net payable. Refund bills net down automatically. Share the block on WhatsApp to the accountant.

Income tax

For presumptive (s.44AD) filers, an estimate of deemed profit and tax, plus advance-tax instalment reminders. Flagged as an estimate, not advice.

2.6 Reports & intelligence

Standard

Day book, item-wise sales profit, cash book with running balance, Profit & Loss, sales summary by day / week / range, fast movers, dead stock, write-offs, low-stock and expiry alerts, receivables and payables.

Cash-flow forecast

A forward 7-day view: kadan collections expected in (open orders on their real due date, other kadan on an assumed credit period), supplier payments expected out, and the net position — with anything overdue shown on day zero. The two credit-period assumptions are adjustable on the screen.

Accountant hand-off

One multi-section CSV (sales, purchases, expenses, receipts, payments, item profit, P&L) and a Tally-import XML. Trial balance and balance sheet are the accountant's job, built from these.

Ask-AI

A plain-language assistant — “how much GST this month?”, “what's not selling?”, “which supplier do I owe most?” — now surfaced as a question bar at the top of the home screen as well as the header button. Online only.

2.7 Printing

Thermal receipt

58 or 80 mm, with the shop name, address line and footer. Prints to a paired Bluetooth thermal printer directly (ESC/POS), or falls back to the Android print dialog / a Wi-Fi printer.

WhatsApp receipt

Send the bill to the customer on WhatsApp in one tap.

2.8 UPI pay links (zero cost)

How it works

The owner sets the shop's UPI ID once. On a WhatsApp bill or kadan reminder that still has a balance, a `upi://pay?pa=...&am=...` line is appended. The customer taps it and their own UPI app opens pre-filled with the shop's ID and the amount — no payment gateway, no fee, no SDK.

The catch

There is no automatic confirmation. The owner still marks the kadan entry received once the money shows in their bank app. For a self-scan basket the customer can pre-pay this way and tick "I've paid"; the counter sees that and confirms.

2.9 Daily WhatsApp digest

Evening summary

At 9 pm the owner gets one WhatsApp: today's sales total and bill count, the cash / UPI / card split, the kadan still to collect, and the low-stock / expiring-soon counts. A separate morning message already carries the low-stock detail. Both need the shop's WhatsApp Business number configured.

2.10 Customer self-scan basket

What it is

The shop prints a QR at the entrance. A customer opens it on their phone (no app, no login), scans items into a basket with a running total, optionally pays by UPI, then hands the basket to the counter.

Handoff

Small baskets are shown as a QR the owner scans — fully offline. Bigger baskets get a 4-character code the customer reads out; the counter pulls it over the network (2-hour, single-use).

At the counter

"Customer basket" in the sell screen pulls the items, prices them from the shop's own catalogue (the customer's list carries no prices), flags anything unknown, and — if the customer marked it paid by UPI — pre-selects the UPI tender with a "check the money landed" note. The owner reviews and completes; nothing rings up on its own.

Why

Cuts the queue for trusted regulars and removes the owner's manual data entry when someone grabs a few things, pays UPI, and leaves. It is not a walk-out self-checkout — the owner still confirms and bills.

2.11 Platform & data

Offline-first

The counter app is a bundled Android APK that keeps its data on the device and works with the radio off. It syncs to the cloud opportunistically, so a second phone or the owner's laptop sees the same catalogue, customers and bills.

Accounts & roles

One login. Owner / manager can edit the catalogue and see cost & margin; staff can sell and move stock but not the rest. A suspended store loses access without losing data.

Backups

Automatic encrypted daily off-site backups of the store data.

3 What Kadai does that conventional POS software doesn't

- Runs on the phone in your pocket — no Windows PC, no LAN cabling.
- Keeps billing with the internet off; syncs the moment it's back; every device sees the same data.
- Voice billing in Tamil / English, matched to your own catalogue by AI.
- Ask-AI in plain language, on the home screen — “how much GST this month?”
- Customer self-scan — the customer builds the basket, you just check and bill.
- Free UPI pay links on bills, kadan reminders and self-scan baskets — no gateway, no fee.
- Snap a photo of a supplier's bill and it books the purchase + GST credit.
- Predictive reorder with a one-tap WhatsApp draft to the supplier.
- 7-day cash-flow forecast and a credit-risk flag on kadan customers.
- Payment reminders to customers on WhatsApp + a daily owner digest.
- Phone-number loyalty points — no plastic card.
- GSTR-3B month summary ready to type into the portal; one-tap CSV / Tally export.
- Automatic encrypted daily off-site backups.

4 Deliberately not built (by design)

- **Full double-entry accounting** — general ledger, trial balance, balance sheet. Kadai feeds the accountant clean registers + a Tally export instead of trying to be the accounting software.
- **Bank ledgers, cheque handling, bank reconciliation** — the target shops rarely use cheques; UPI reconciliation is built in its place.
- **Membership / plastic loyalty cards** — loyalty is phone-number based.
- **Inter-state (IGST) billing** — the target shops bill locally (intra-state).
- **Wholesale / multiple price tiers** per item.
- **Promotional “scheme” pricing engine.**
- **Walk-out self-checkout** — self-scan still needs the owner to confirm and bill. A true walk-out flow is a later step with its own controls.

5 Maturity & how it runs

The customer-facing self-scan page and all the server-side features run on the web. The counter screens ship inside a bundled Android app that keeps its data on the device and works offline, syncing to the cloud when a connection is available.

Verified end-to-end

- Billing depth — per-line + whole-bill discount, rounding, split / card tender, salesman.
- Bill series, back-dated bills, refund GST reversal, GSTR-3B month summary.
- Loyalty accrual + redeem; loyalty points sync across devices intact.
- Predictive reorder, 7-day cash-flow forecast, credit-risk flag, the evening digest.
- AI voice matching — a spoken list resolved against the shop's live catalogue.
- Customer self-scan — catalogue read, basket submit → code → single-use counter pull, per-shop on / off.

Under final device validation

- Bluetooth thermal printing against a physical printer.
- Tamil speech recognition accuracy, and a full Tamil voice list end-to-end.
- The customer page's camera barcode scan and the UPI pay link on a customer's phone.

Enabling customer self-scan

The owner switches "Customer self-scan" on in Settings and enters the shop's UPI ID, then prints the QR shown there for the shop entrance. Each shop has its own QR; it can be turned off at any time.

OmniWealth Kadai is OmniWealth's offline billing + stock module for small retail. Feature status current as of the date on the cover.
