

# Kadai

OmniWealth Kadai

**Bill in Tamil or English.  
Sell the oldest stock first.  
Know who owes you,  
and who has paid.**

One app for your counter: fast billing, expiry-aware stock, credit, UPI checking, cash close and barcode labels. It keeps working without internet.

## Built for kirana, grocery, medical and general stores

### ● Fast counter

Scan, search or speak the items. Hold bills, split payments, share the bill on WhatsApp.

### ● Stock that watches itself

Expiry dates per batch, low-stock alerts, stock count and reorder suggestions.

### ● Money you can trust

Credit limits, UPI matching, day close, expenses and GST-ready reports.

### ● Tamil first

Every screen in Tamil and English. Voice entry understands Tamil, English and a mix.

### ● Works offline

Billing never waits for the internet. Phones sync when a connection returns.

### ● Many phones, one shop

Owner, manager and staff roles. Staff do not see your cost prices.

Apps for Android and iPhone, plus a web version. Screens shown are from a sample shop with sample data.

# What Kadai does for your shop

Twelve things shopkeepers use every day.

## Bill in seconds

Scan barcodes, search, or speak the items in Tamil, English or a mix. Hold a bill while you serve the next customer. Pay by cash, UPI, card, credit or a split. Print the bill or send it on WhatsApp.

## Sell the oldest stock first

Every delivery keeps its own expiry date. At billing Kadai tells you which batch to sell first and offers a one-tap markdown for items close to expiry, so less goes to waste.

## Wholesale and retail

Give a product a wholesale rate, switch a bill between retail and wholesale, mark wholesale customers, and run "buy 10, get 1 free" schemes. Free items leave stock automatically.

## Credit under control

See who owes you what, set credit limits, record payments, and send a WhatsApp reminder. Credit bills warn you when a customer goes over their limit.

## Check your UPI money

Match money received against your UPI bills and see bills with no matching payment. On Android, Kadai can read PhonePe, Google Pay and Paytm payment notifications if you allow it. On iPhone, a Shortcut can forward your bank SMS. Pasting a message works everywhere.

## Stock count

Count the shelf, see the shortage or extra in rupees, and apply the counts in one tap. Every change is recorded.

## Day close

At night, check the cash drawer against the day's cash sales, cash received and cash expenses, and see whether it is short or over.

## Barcode labels

Print price and barcode stickers on an A4 sheet or a label roll. Items with no barcode get a code you can stick on and scan at billing.

## Reports and GST

Daily sales, fast and slow sellers, reorder list and a seven-day cash-flow view. GST-ready invoices and an export your accountant can open (CSV and Tally XML). Figures come from your own entries.

## Works offline

Billing, stock and voice keep working with no internet. Everything saves on the phone and syncs by itself when a connection returns.

## Tamil and English

Every screen is available in both. Switch with one tap.

## Ask Kadai

Ask questions about your sales, stock or GST in plain words and get an answer from your own data (uses AI, only when you allow it).

# Billing and stock

Everything at the counter, without leaving the bill.

## Batches by expiry date

Each delivery keeps its own date. Wholesale rate and scheme are set on the product. The older batch is always sold first.

## Everything one tap away

Sales, customers, orders, expenses, purchases, suppliers, tax, UPI check, stock count, day close, labels, reports and more.

## Why it matters

- No guessing which packet is older: Kadai points to the batch to sell first.
- Wholesale buyers get their rate with one tap, and schemes apply themselves.
- Hold a bill, serve the next customer, and come back to it.

# Money: UPI, cash and credit

Know what came in, what is owed, and whether the drawer is right.

## Customers and credit

Balances at a glance, credit limits, payments received and WhatsApp reminders. Mark wholesale customers to bill them at wholesale rates.

## How payment notifications are handled

On Android, automatic UPI matching is off until you switch it on in Android settings. Kadai then reads only the notifications from PhonePe, Google Pay, Paytm and BHIM, and only to find "money received" messages. It never reads your SMS or other apps. On iPhone, a Shortcut you set up sends your bank's credit SMS to your shop. You can turn either off at any time.

# Stock control and reports

Count, label and review, with the numbers in rupees.

Apply counts

## Stock count

Search or scan a product and type what is on the shelf. Nothing changes until you tap Apply. Shortage and extra are shown in rupees.

## Weekly sales

Your recorded bills by day, expenses for the month, fast movers, dead stock and a reorder list.

## Barcode labels

Price and barcode stickers for an A4 sheet or a label roll. Items without a barcode get a scannable code.

## Every change is on record

Stock counts, write-offs, returns and voided bills appear in an activity log, with who did it.

## Why it matters

- See shrinkage in rupees, not just in counts.
- Know what to reorder and what has been sitting on the shelf.
- Labels with barcodes make billing and counting faster.

# And the rest

The details that shops ask for.

## At the counter

- Refunds and returns, back-dated bills
- Discounts per line or per bill, round-off
- Loyalty points for regular customers
- Customer self-scan basket (customer builds a basket, counter pulls it in)
- Receipt printing: phone printer or Bluetooth thermal printer
- GST invoices with CGST and SGST, HSN codes

## Stock and buying

- Import products from Excel or CSV
- Photograph a supplier bill to add stock (AI, with your permission)
- Purchases, supplier ledger and payments
- Return goods to a supplier
- Low-stock WhatsApp alert
- Reorder suggestions and dead-stock report

## Money and control

- Expenses by category
- Advance orders with part payments
- Seven-day cash-flow view
- GST and income-tax estimate screens
- Accountant export: CSV and Tally XML
- Owner, manager and staff roles

## Your data and your phones

### Local first

Your shop data lives on the phone, so billing works with no signal. It syncs to the cloud and to your other phones when the internet returns.

### Roles

Owners and managers see everything. Staff can bill and adjust stock, but cannot see cost prices, reports or the owner tools.

### You are in control

Optional features that read payment notifications or use AI ask first, explain what they use, and can be switched off at any time.

## Getting started

- 1 Sign in with the account created for your shop.
- 2 Add your products: import a sheet, scan a supplier bill, or add as you go.
- 3 Take your first bill. Everything else is one tap away in Settings.

Android 7 or newer, iPhone with iOS 15.5 or newer, and a web version. Figures in Kadai come from your own entries and are not a tax filing or tax advice. Screens in this document show a sample shop with sample data.
